EDUCATION

Comsats University

Bachelor of Technology in Computer Science

Lahore, Pakistan

Expected 2026

- CGPA: 3.87/4
- Relevant Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Software Engineering, Database Systems

EXPERIENCE

Software Development Intern

Self-Driven Projects

2024 – Present

Remote

- Designed and developed 4+ production-level Android applications with 500+ active users
- Implemented custom backend solutions using Node.js and WebSockets, reducing Firebase costs by 40%
- Optimized local data caching with Room DB, decreasing app launch time by 30%
- Integrated CI/CD pipelines using GitHub Actions for automated testing and deployment

PROJECTS

Real-Time Chat App — Android, Java, Node.js, WebSockets, Firebase, Room DB

- Built full-stack chat application with custom socket server handling 100+ concurrent connections
- Implemented end-to-end encryption for messages and file transfers with AES-256
- Reduced bandwidth usage by 35% through message compression and binary protocols

Free Room Finder — Android, Kotlin, Python, Firebase, Web Scraping

- Developed Python scraper to parse PDF/Excel timetables with 95% accuracy using regex and pandas
- Created Android app with dynamic filters showing 200+ room availability in real-time
- Implemented monetization through rewarded ads, generating \$150/month in revenue

Mona AI Chatbot — Android, Kotlin, Together AI API, Room DB

- Integrated LLM API to create conversational AI assistant with code formatting support
- Reduced API costs by 40% through local caching of frequent queries
- Implemented Markdown rendering for rich text display of AI responses

PDF Timetable Parser — Python, pandas, Regular Expressions

- Automated extraction of course schedules from unstructured PDFs saving 20+ hours weekly
- Generated structured JSON output used by 200+ students for academic planning

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, JavaScript, SQL

Frameworks: Android SDK, Node.js, Express, Socket.IO, Room Persistence

Tools: Git, Firebase, Figma, LaTeX, Postman, Adobe XD

Technologies: REST APIs, WebSockets, PDF/Excel Parsing, FCM, WorkManager

Concepts: OOP, Data Structures, Algorithms, CI/CD, Software Architecture

ACHIEVEMENTS

- Built end-to-end chat system supporting 500+ daily messages without Firebase real-time DB
- Automated timetable processing adopted by university administration for campus scheduling
- Google Developer Student Clubs member - delivered 3 tech talks on Android development
- Hackathon winner - created emergency alert system using Android and Twilio API
